Portfolio — case studies with video walkthroughs of the work below: purzycki.pl

SUMMARY

Frontend engineer with eleven years turning designs into production interfaces. The last four in React and Next.js with TypeScript, as **sole frontend developer** on two live products at a European cloud telephony provider — a Next.js administration platform and a real-time agent console — and on the centralised sign-in service both now use. Owned component architecture, API integration, testing, performance and release. Before that, seven years of agency and freelance work: **dozens of WordPress websites** built pixel-accurate from Photoshop, Adobe XD and Figma designs, several of them still live.

KEY SKILLS

Core	TypeScript, JavaScript (ES6+), HTML5, CSS3, PHP
Frameworks	React 19, Next.js 16 (App Router), Vue 3, Nuxt
CMS	WordPress (custom and block themes, Gutenberg, plugins, WPML), WooCommerce, Umbraco, Kentico
State & Data	Redux Toolkit, RTK Query, REST APIs, normalised state models
Styling	Tailwind CSS, SCSS, CSS custom properties, Material UI, Chakra UI
Testing	Cypress (E2E + visual regression), Vitest, React Testing Library
Build & CI/CD	Vite, Webpack, ESLint, Prettier, GitLab CI, GitHub Actions, Docker, Google Cloud Run
Performance	List virtualisation, code splitting, bundle analysis, cache invalidation, SSR
AI	Claude API (structured output, streaming), Claude Code in daily work
Also	Electron, WebRTC/SIP, XMPP, RxJS, OAuth2/OIDC, Ory, i18n, Figma, Adobe XD, Photoshop

EXPERIENCE

Frontend Developer — [Talksome](#) Jul 2022 – Jul 2026 · Remote

Compass is a cloud telephony platform — call routing, IVR, queues — sold to businesses under several whitelabel reseller brands. **Sole frontend developer for four years**, working with product and backend across a distributed, English-speaking team.

Compass Studio — Next.js administration platform — [case study](#)

- Developed an early-stage codebase into the production admin suite as its **main author: Next.js, React, TypeScript, Redux Toolkit + RTK Query, Tailwind CSS**.
- Owned the Queues, Prompts and Voicemails domains end to end — API layer, **multi-step wizards**, sortable and filterable tables — which became the patterns the rest of the application was built from.
- Extended a **drag-and-drop call-flow editor** — IVR menus, time-based routing and caller recognition, nested arbitrarily deep — and made it fully **keyboard-operable**.
- Performance:** virtualised long lists and cut redundant requests through targeted RTK Query cache invalidation. Owned EN/NL **internationalisation**.

Compass Bridge — real-time agent console and WebRTC softphone — [case study](#) · [live demo](#) (no login)

- Sole developer of a mature **WebRTC/SIP** softphone: registration, audio devices, multi-call state, attended and blind transfer.
- Maintained the **real-time layer**: live users, calls, queues and presence bridged from XMPP into Redux via **RxJS**.
- Built the **call-history subsystem from scratch**, assembling call outcomes client-side from the event stream: transfer detection, deduplication, virtualised scrolling.
- Built the macOS and Windows desktop apps (**Electron**), then drove their retirement once the web client had replaced them.

Centralised sign-in service (SSO, MFA) — [case study](#)

- Designed and built from an empty repository the **sign-in service** both products now delegate authentication to, with every screen designed and reviewed before code.
- Next.js** app running **OAuth 2.0 / OIDC** flows through **Ory Hydra** and **Ory Kratos**, tokens kept server-side. One deployment serves every reseller brand, themed per hostname; **TOTP two-step verification** with guided enrolment.

Engineering practice

- Migrated **Webpack** → **Vite**, TSLint → ESLint flat config and class components → hooks, with Prettier enforced in CI.

- Wrote **Cypress E2E** suites and introduced **visual regression testing** with image snapshots. **GitLab CI/CD** with Dockerised builds and tagged releases.

"I worked with Piotr for four years, during which he was responsible for several of our frontend projects and worked very independently. He worked extensively with React and NextJS, and added Cypress into our frontend development process. You can give him responsibility without having to constantly look over his shoulder."

— Maurits de Ruiter, Senior Software Developer, Talksome, Aug 2026

Frontend & WordPress Developer — agencies and freelance

Jan 2015 – Jun 2022 · Wrocław / Remote

ADHD Interactive (2022) · **eFRESH** (2020–2021) · **Mobile Five Media / HYD Agency** (2019–2020) · **freelance** (2015–2019)

- Dozens of websites** for agency and direct clients, built pixel-accurate from **Photoshop, Adobe XD and Figma** designs: responsive, hand-coded **WordPress** themes and plugins in PHP, SCSS and JavaScript, no page builders.
- End-to-end delivery for direct clients — scoping, estimates, build, deployment and support — including **WooCommerce** stores, performance, SEO readiness and cross-browser compatibility.
- Dynamic data inside CMS sites, such as race data fetched from an API and rendered client-side with **Vue.js**; templates and components for **.NET Core** sites on **Umbraco** and **Kentico**.

SELECTED PROJECTS

Grid Architekci (2026)	Architecture studio site rebuilt as a WordPress block theme : 11 custom Gutenberg blocks, scripted migration of 48 projects and ~950 images, PL/EN, every old URL preserved. PageSpeed 94 mobile / 100 desktop .	case study · grid.net.pl
Recast (2026)	Job-application tracker with AI-tailored CVs that cite the experience each line came from. Next.js 16, Postgres, Claude API ; Docker , GitHub Actions deploying to Google Cloud Run .	github.com/purzyk/recast
Explain Everything (2018)	Marketing site for a whiteboard app used in classrooms worldwide: theme built from the designs to the pixel, with reusable blocks the client's team composes pages from. Still live.	explaineverything.com
GBGB (2021)	Greyhound Board of Great Britain: race data from an API rendered client-side in Vue.js inside WordPress, dense tables made readable on a phone. Still live.	gbgb.org.uk
Port Praski (2019)	Property development district in Warsaw: listings, interactive site plans and image-heavy pages kept fast on mobile, PL/EN.	portpraski.pl
Staropolanka (ongoing)	WooCommerce store for a Polish mineral water brand, still maintained: catalogue, shipping rules, e-commerce analytics, EU consumer-law compliance.	staropolanka.pl

EDUCATION

Politechnika Wrocławska — Computer Science and Physics, 2009–2014. Five years completed; no degree awarded.
